WE ARE REVOLUTIONISING FINANCIAL INFORMATION SHARING

DO YOU WANT TO BE A PART OF IT?

## The Opportunity

**Role:** Java Developer

**What that means:** Developing the Java backend services that power the Armalytix platform

## The Company

At Armalytix, our mission is to build extraordinary processes to transform how firms request, prepare and process clients' financial information.

We value ability and dedication, driven by openness, collaboration and well-being. You will be a key part of the team helping to reshape and simplify the financial landscape for people - one check at a time.

We build digital checks that deliver, enabling a future free from forms.

## Your Mission

You will be a core member of the Armalytix engineering team.  You will help to ensure that we deliver a fast, intuitive and secure platform for our clients.

## A bit about you

- You will be a developer with a proven track record of software development.
- You will have demonstrable experience with Java and the Spring framework.
- You will have experience of developing modern, commercial grade applications using agile methodologies.
- You will be familiar with Docker/Kubernetes and cloud-based infrastructure.
- You are familiar with developing and using Restful APIs.
- You are familiar with Atlassian suite of Products, Jira, Bitbucket, Confluence or similar alternatives.
- You enjoy interacting with clients, customers and colleagues.

## What it will take

- You enjoy working in a start-up where your contribution and impact makes all the difference.
- You have the ambition to take on larger roles as the company continues to grow.
- You're a great communicator who's at home interacting with clients and partners at any level.
