

WE ARE REVOLUTIONISING FINANCIAL INFORMATION SHARING DO YOU WANT TO BE A PART OF IT?

The Opportunity

Role: DevSecOps Engineer

Reports to: Head of Infosec and Engineering

What that means: As a vital member of our team, you will play a crucial role in assisting the Head of InfoSec and Engineering in expanding and sustaining the Armalytix engineering pipelines and tooling to ensure functionality, performance, security, scalability and maintainability. This requires expertise across the three key areas of development, security and technical operations, together with an appetite to learn and implement new technologies and tools.

The Company

At Armalytix, our mission is to build extraordinary processes to transform how firms request, prepare and process clients' financial information. We value ability and dedication, driven by openness, collaboration and well-being. You will be a key part of the team helping to reshape and simplify the financial landscape for people - one report at a time.

Your Mission

As a key member of the Armalytix team, your mission is to work within the wider development and engineering team to continually improve our ability to efficiently and accurately deliver new functionality while ensuring security and reliability.

The role is to support the Head of Infosec and Engineering in

- Operational and Information Security in the context of FCA regulations and ISO27001 certification.
- Support infrastructure components deployed to AWS and GCP using Infrastructure as Code.
- Maintain and secure tooling for automated build and deployments pipelines.
- Vulnerability management
- Work closely with development team to foster best practices during the development lifecycle
- Monitoring and Incident response
- Developing and supporting the use of AI in Infosec and Engineering

What it will take

- At least 3-5 years experience in a DevSecOps role
- Experience of working in a cloud-first environment
- Experience of using IaC tools, such as Terraform
- Experience of working with Kubernetes
- Good level of skill in either Python or Java
- Excellent verbal and written communicator
- Appetite to learn new technologies and develop new skills

What you will get

- Pension
- Unlimited Annual Leave Policy
- Private Medical Insurance
- Group Life Insurance
- Cycle to Work Scheme
- Electric Car Scheme
- Share Option Scheme
- Career progression and Fintech market experience.
- Comprehensive new starter training and company laptop
- Armalytix is a place where you can design and develop a career. We support our people through growth and challenges alike.
- This is a chance to become part of a dynamic, positive, and fast-paced company. The only thing holding you back will be your ambition.
