

## WE ARE REVOLUTIONISING FINANCIAL INFORMATION SHARING

### DO YOU WANT TO BE A PART OF IT?

#### The Opportunity

**Role:** Front End Engineer

**Reports to:** Lead Front End Engineer.

**What that means:** You will work alongside our Lead Front End Engineer to build and improve the interfaces that regulated firms use every day to verify their customers' financial information. You will own features from design through to delivery, writing clean, accessible front end code and helping shape how our product looks and feels as we grow.

#### The Company

At Armalytix, our mission is to build extraordinary processes to transform how firms request, prepare and process clients' financial information. We value ability and dedication, driven by openness, collaboration and well-being. You will be a key part of the team helping to reshape and simplify the financial landscape for people - one report at a time.

#### Your Mission

You will be the engineer closest to what our customers actually see and use. Your mission is to build interfaces that make complex financial data clear, actionable, and easy to navigate - helping regulated firms make confident decisions faster. Working closely with the Lead Front End Engineer and the wider product team, you will turn product ideas into polished, production-ready experiences.

#### Working with the Lead Front End Engineer, you will

- Design, develop, and deliver modern front end features utilising JavaScript/Typescript and related technical standards
- Build reusable components and scalable front end architectures
- Integrate with REST APIs and backend services to bring data into the UI
- Ensure front end quality through testing, code review, and CI/CD pipeline integration
- Optimise for performance, accessibility, and responsive design across devices
- Collaborate with engineers across the stack on cross-cutting features and projects
- Participate in technical discussions and contribute to front end standards and decisions
- Communicate UI/UX decisions clearly to both technical and non-technical colleagues

#### What it will take

- Deep experience in core frontend technologies, including HTML5, CSS3, JavaScript/Typescript, ES6, Vue3, ReactJS, and NodeJS.
- Strong proficiency with styling and templating frameworks, SASS, LESS, Tailwind or Bootstrap.

<https://armalytix.com/join-the-team/>

- Attention to UI/UX detail – you take pride in building intuitive, beautiful products.
- Proven track record of a strong commercial experience building and maintaining production SPAs
- Experience in mobile development for both iOS and Android. Experience using EXPO is desirable.
- Solid CI/CD capability with hands-on experience maintaining technical quality via Git, Bitbucket, Codefresh.
- Strong collaboration and stakeholder management skills, with a demonstrable ability to work effectively across multidisciplinary teams, including full-stack and backend peers
- Confident daily use of AI tools to accelerate development and enhance workflow.
- WebSockets and real-time application experience desirable

## What you will get

- Hybrid working: 2 days in the office, 3 days remote
- Pension
- Unlimited Annual Leave Policy
- Private Medical Insurance
- Group Life Insurance
- Cycle to Work Scheme
- Electric Car Scheme
- Share Option Scheme
- Career progression and Fintech market experience.
- Comprehensive new starter training and company laptop
- Armalytix is a place where you can design and develop a career. We support our people through growth and challenges alike.
- This is a chance to become part of a dynamic, positive, and fast-paced company. The only thing holding you back will be your ambition.
